HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Key words. astrochemistry – cosmic rays – molecular processes – ISM: lines and bands – solid state: volatile – errata, addenda

A typographical error must be corrected in Table 2. The integrated band strength (*A* value, cm molec⁻¹) for the CO₂ stretch at 2350 cm⁻¹ was incorrectly typeset and attributed the same

value as the CH₃OH C–O stretch (1.8×10^{-17} cm molec⁻¹), and the reference D'Hendecourt & Allamandola (1986). They have been replaced in Table 2.

Table 2. Integrated band strengths used in the analysis.
